LDG clearance will be issued only if touchdown will occur before the night ban.

VFR traffic must have planned their FLTs in order to RCH the AD circuit at least 30 MIN before the end of evening civil TWIL (REF: GEN 2.7.). This is to ensure that LDGs can take place before the end of evening civil TWIL despite possible delays caused by ATC or other events.

Application forms are obtained from the Genève AP Authorities. A CMPL form must be returned, by FAX, to the same authorities, at least three working days before the date of the planned FLT.

A copy of this form, with “permission granted” by FOCA, must travel and remain with the ACFT FLT documents for the DUR of the stay at Genève AP.

Chapter two ACFT, holding an exemption permit, are subject to the following restrictions:
LDGs and TKOFs from MON to FRI, 0800 to 1759 (0700 to 1659), except during locally recognised HOL.

Chapter two ACFT, holding an exemption permit, are still liable for all relevant AP and ATC charges as per GEN 4.1.4. LSGG and GEN 4.2.1.

The Genève AP Authorities reserve the right to impose a fine on the applicant if the above is not respected.

The procedures for all foreign government, and foreign MIL, chapter two ACFT are as per GEN 1.2.5.

3. Reporting of parking position at departure

At DEP, all crews of ACFT parked on the main apron shall report the ACFT stand number when establishing the first RTF contact with ”Geneva Ground”.
These numbers, indicated in LSGG AD 2.8, are conspicuously displayed on the front of the terminal BLDG and of the satellites.

5. Safety and Security

5.1 Safety

All persons walking on the movement area (incl. FLT crew during pre-flight check) must wear a high-visibility safety equipment (jacket or vest) which complies with the EN 471 standard class 2 or 3.
If unable to comply with the above rule, persons must ask for assistance of a handling agent.
South Apron: walking on tarmac is not permitted except for remote push operators or access to stands 1 to 11 from doors C1 or C4.

Smoking on airside is strictly forbidden except in specific designated areas.
Lightning alert: A siren, followed by flashing red lights, is activated on the movement areas if there is a risk of lightning within a radius of 5 km around the airport.
During the alert: - persons who are outside and not under a shelter are strongly advised to enter a building or to remain in the aircraft until the end of the alert.
- ground handling and refuelling operations are suspended.
End of the alert: The flashing red lights are switched off and the siren sounds intermittently for 5 seconds.

5.2 Security

Access to security restricted area is only permitted with a valid Airport Identification Card (CIA) or a valid Crew Member Certificate (CMC), both duly validated by Geneva Airport Security (Flight crew licence not accepted).
CIA or CMC must be clearly displayed at all time while in this area.
If unable to comply with the above rule, persons must ask for assistance of a handling agent.

6. Airport shuttle

Genève AP does not transport crew members or passengers of commercial air transporters. Such crew members or passengers must ask a handling agent for assistance. Home-based carriers can transport their own crew members.

7. Parking

All ACFT not coordinated by Slot Coordination Switzerland, and with a wing span exceeding 30 m: PPR via handling agent at Genève due to limited parking PSN. Authorised ground time at Genève may be limited.
- North zone is limited to ACFT with a wing span not exceeding 21.50 m.
- For ACFT with a wing span exceeding 21.50 m, special AUTH may be requested from Genève AP Authority for MAINT purposes only.
- P-48: Tow-in and tow-out mandatory. TAX not allowed inside the parking (beyond “stop engine” line).
- Arriving general and business aviation FLTs must notify the estimated parking period through a PPR request.
- All ACFT operator and handling agent must ensure that ACFT are properly parked with chocks in place.
Parking PSNs are always assigned by AP Authority.
Except for MAINT purposes, ACFT without valid certificates (Airworthiness certificate, Registration certificate or insurance certificate) are not allowed on parking PSNs. Parking permission can be revoked accordingly and the ACFT owner and/or operator required to remove said ACFT out of the AP boundaries without delay.

8. ACFT guidance on apron

8.1 General

The Genève AP Authority is operating “Geneva Apron” (way securing service) see LSGG AD 2.18.

8.2 Area of responsibility

The limits of the area of responsibility are shown on chart.

8.3 Procedures / Authorisations

Single engine TAX is not allowed for HEAVY ACFT (wake turbulence category).

8.3.1 Arriving aircraft

North Apron:
ACFT PCD to the North Apron shall, until having passed the CAT I stop bar, expedite the vacation of the CONC RWY via TWY YANKEE or ZULU as instructed by "Geneva Tower". The ACFT will be instructed to contact "Geneva Ground" on FREQ 121.680 MHz for TAX.
South Apron:
All arriving ACFT shall expedite the vacation of the CONC RWY. When instructed by "Geneva Tower", contact "Geneva Apron" on FREQ 121.855 MHz.
Crews should aim to keep a reasonable speed until having passed the CAT I stop bar and to stop only at the CAT II/III stop bar if no clearance to enter the OUTER TWY has been received from APRON (121.855 MHz).
When RWY 22 is in use:
ACFT shall not use TWY CHARLIE unless otherwise instructed by TWR. If instructed to vacate via TWY CHARLIE, ACFT shall clear the RWY and hold on TWY CHARLIE, remaining Clear of the OUTER TWY.

8.3.2 Departing aircraft

8.3.2.1 Airport Collaborative Decision Making (A-CDM)

A-CDM is part of the European programme "Single European Sky" to optimise airspace and AP operations. A-CDM is a harmonised concept supported by EUROCONTROL where procedures and processes are aligned throughout Europe. The aim of the concept is to optimise the turn-around process in order to ensure the best possible co-ordination of resources. Providing all partners with accurate and timely information will allow decisions to be made to ensure that the turn-around of a FLT is efficient and everyone has a common awareness of the situation.
A-CDM is based on partnership at APs between AP Operations, ATC, ACFT Operators (AO), Ground Handlers (GH) and the Network Managers Operation Centre (NMOC). Emphasis is put on:

- Linking the INBD, turn-around and outbound processes of FLTs.
- Sharing of the right information at the right time to the right people best placed to act upon it.
- Improved FLT data exchange between APs and the ATFM network (NMOC).
- A-CDM is implemented in GVA airport environment through the introduction of the following operational procedures.
- TOBT improves predictability during the turn-around process of aircraft. The TOBT has to be set and updated by the handling agents.
- TOBT is key data for a proper processing for GVA A-CDM concept, as it permits to determine the TSAT and the TTOT.

8.3.2.2 A-CDM Procedure

Flight Plan Check

The ATC FPL originator needs to check if the ATC flight plan is consistent with the AP slot. Filing and updating the flight plan is and remains the responsibility of the ACFT Operator (AO). He may delegate these tasks to his accredited Handling Agent.

Target Off Block Time (TOBT) management

TOBT is set and updated by the handling agents based upon the following status:

- Aircraft ready, doors closed.
- Fuelling completed.
- If required push-back truck connected.
- If required de-icing completed.

The TOBT must be updated by the handling agent as soon as he is aware of variation in readiness of a flight (delay or improvement) of 5 minutes or more.
Communication of the TOBT:

- The Handling Agents are responsible to transmit the TOBT to the flight crew.
- TOBT for all flights are also accessible on the Flight Information Display System (FIDS) monitors.

Estimated Off-Block Time (EOBT) management

The aircraft operator is still required to update flight plan by sending DLA to avoid Flight Suspension Message (FLS) due to Flight Activation Monitoring (FAM) process, when EOBT is modified by more than 15 minutes.

Target Start-up Approval Time (TSAT)

The system calculates for every DEP the best possible start-up and/or off-block time to reduce queuing times at the RWY, while maintaining a high RWY capacity. The TSAT is calculated by taking into account TOBT, Calculated Take-Off Time (CTOT), Variable Taxi Times (VTT) from the parking PSN to the DEP RWY. Apron Control and ATC will CONT to optimise the DEP order sequence by ensuring the right mix of traffic.
The calculated TSAT will be displayed in the Airport Operational Database (AODB) to inform Ground Handling (GH).

Coordination with the Network Manager Operations Centre (NMOC) / CTOT processing

A PERM and fully automatic data exchange with the NMOC is established. This data transfer enables accurate and early prediction of DEP times. Furthermore this allows a more accurate and efficient calculation of the CTOT due to the use of local Target Take-Off Time (TTOT). The following messages are used for each individual FLT:

- Early Departure Planning Information Message (E-DPI) based on current Flight Plan data.
- Target Departure Planning Information Message (T-DPI) based on TOBT and later on TSAT.
- ATC Departure Planning Information Message (A-DPI) based on actual off-block time.
- Cancel Departure Planning Information Message (C-DPI) when local CDM process is interrupted.

8.3.2.3 ATC Clearance

ATC DEP clearance request is possible with GND **(121.680 MHz)** via voice or DCL at the earliest 15 minutes before the TOBT and latest at TOBT. The pilot shall indicate the parking position.

8.3.2.4 Data Link ATC Clearance (DCL)

8.3.2.4.1 Introduction

Skyguide DCL service at Geneva aerodrome provides additional data link means of requesting/issuing ATC clearance for departing aircraft without intention to replace, but rather to co-exist with the voice communications.

DCL is implemented in accordance with EUROCAE specification ED-85A; edition December 2003, and is available to all ACARS equipped aircraft on the ground.

DCL at Geneva Aerodrome is managed by Geneva TWR.

8.3.2.4.2 Requirements

The message must be routed via either SITA or ARINC and comply with ARINC specification 623-2 and the EUROCAE specification ED-85A.

Aircraft operators intending to use data link for obtaining ATC clearance shall ensure that their flight crews are properly trained.

8.3.2.4.3 Messages used in DCL

The following operational messages may be sent by pilot:

- RCD: Request Clearance Departure message
- CDA: Clearance Departure echoback message (equivalent to read-back)

The following operational messages may be sent by controller:

- CLD: Clearance Departure message

The following system message is sent automatically by ATC ground system:

- FSM: Flight System Message (logical response, may be positive or negative)

8.3.2.4.4 Operational Procedure

The decision to use DCL or voice communication is entirely at the discretion of the pilot and/or controller involved.

Pilot may request DCL Clearance by sending RCD message from EOBT/TOBT -15 minutes (ti) until EOBT/TOBT +10 minutes or CTOT-5 minutes (tt) as applicable. RCD message sent outside of the EOBT/TOBT/CTOT tolerance window will be discarded and system will respond with the appropriate error message.

Free text contains in RCD will not be considered by ATC. Any specific request shall be transmitted by voice.

If the pilot finds the content of the ATC clearance delivered by data link unsatisfactory, he/she shall advise controller accordingly by voice communication.

If the pilot accepts the content of ATC clearance received, he/she should acknowledge the received clearance by sending CDA message. If receipt of the clearance has not been acknowledged within 10 minutes (t1), the system will consider an error has occurred.

Under these circumstances, or when any messaging error occurs, a message requiring the flight crew to 'revert to voice procedures' will be sent. When an error message is received, pilot shall consider the ATC clearance delivered via data link cancelled and not valid, and revert to voice.

Pilots shall consider the ATC clearance delivered and acknowledged only after the ground system responds with the clearance confirmation.

No further pilot or system generated DCL request should be made once a successful clearance has been received. The system cannot be used for re-clearance or checking for any update nor can ATC respond via data link to any additional information added in the remarks field.

8.3.2.4.5 Problem reports

Should problems be experienced with the use of DCL, contact should be made with the ATC at the aerodrome. Discussion on the RTF should be avoided. ATC may inquire about the following information required to assist in the investigation: Callsign, Aircraft type and Registration, Departure Airport, Destination, and Time (UTC).

8.3.2.4.6 RCD processing in ground ATC system and content of the FSM messages sent to pilot

8.3.2.5 Start-up clearance and push-back (if required)

South Apron

When **fully ready** (doors closed, fuelling completed, push-back truck connected when needed, and **if required de-icing completed**), the pilot **shall contact** GND (121.680 MHz) at latest at TOBT. APRON (121.855 MHz) will issue the start-up (and push-back if required) within TSAT -5/+5 minutes. Start-up shall be initiated during push-back unless otherwise instructed by APRON.

North Apron:

When **fully ready** (doors closed, fuelling completed, and **if required de-icing completed**), the pilot **shall request** start-up and taxi clearance from GND (121.680 MHz) at latest at TOBT.
GND will issue the start-up clearance within TSAT -5/+5 minutes.

8.3.2.6 Winter Operation

It is the handling agent's responsibility to feed the A-CDM platform with the deicing information.
Clean Aircraft Concept as defined in ICAO Doc 9640 is applied, aircraft are de-iced according to the requirements of SAE AS6285. Airport Authority can intervene in case of non-adherence.

8.3.3 Transmission of messages

”Geneva Apron” will only TRANS messages within its competence.
As a rule, messages such as:

- Wind, VIS, RVR, temperature, QNH, QFE, RWY-report (EXC Apron) will not be transmitted by ”Geneva Apron”.

8.3.4 Push-back and tow procedures

In all cases, the ACFT rotating beacon shall be operated during the push-back procedure.
If security requires, ”Follow me” vehicles will escort ACFT during the push-back procedure.
Request ATC clearance with ”Geneva Ground”, FREQ **121.680** MHz.
Start-up shall be initiated during push-back unless otherwise instructed by “Geneva Apron”, FREQ **121.855** MHz.
Request push-back and start-up clearance with ”Geneva Apron”, FREQ **121.855** MHz.
For the towing or push-back of an operating ACFT a general AUTH will only be given to the cockpit crew. Detailed instructions will be transmitted directly to the driver.
All instructions for the tow or push-back of ACFT with MAINT personnel in the cockpit will be transmitted directly by ”Geneva Apron” on the tow vehicle’s FREQ to the driver.

Notes:
- Clearances for push-back or TAX may only be requested if the ACFT is immediately ready to carry out the manoeuvre.
- Changes of FREQ must be carried out immediately, as instructed.

All ACFT operators and handling agents must ensure, H24 and within a MAX of one HR, that push-back equipment and personnel, as well as an authorised cockpit brake operator, are AVBL for their ACFT. Due to operational reasons, Genève AP Authorities may ask for the repositioning of an ACFT. Towing costs will be charged to the operator.
Parking PSNs GOLF for General Aviation FLTs:
Push-back into PSNs GOLF 1 - 4 is mandatory on ARR. Passengers must remain on board until the ACFT is in the final parking PSN and secured.

9. Run-up

Run-ups are subject to a prior AUTH of the Genève AP Authority (Operation Division), “Apron Control”,
Phone: 7141, 7140.

Genève AP may neither be planned as a DEST nor as an ALTN for A380 due to insufficient space on the apron.

LSGG AD 2.21 NOISE ABATEMENT PROCEDURES

1. General

The following procedures are defined to reduce noise around Genève AP. They also apply to training and check FLTs.

Pilots may deviate from Noise Abatement Procedures only upon instruction by ATC, previous AUTH of Genève AP Authority or FOCA, or for safety reasons.

The term “Night“ covers the period between 2100 and 0459 (2000 and 0359). The term “Day“ covers the period between 0500 and 2059 (0400 and 1959).

Training and check FLTs are prohibited at night.

The North Apron (GAC) is CLSD at night, except for ambulance FLTs and towed ground movements.

TKOFs of jet ACFT with a noise certificate in accordance with the standards of ICAO Annex 16, Volume I, Second Part, Chapter 2 are prohibited.

As of 30 MAR 2008, TKOFs and LDGs of ACFT complying with noise certification requirements of ICAO Annex 16, Volume I, Part 2, Chapter 3 by a margin equal to or lower than 5dbA are prohibited at night.

2. Arrival

2.1 ILS approach

ILS APCH shall be carried out at an angle equal to or above the GP angle established for each direction as defined by the ILS profile.

The descent shall be planned as to maintain a clean configuration as long as possible, considering safety and ATC requirements.

2.2 RWY 22: Arrival from the South

Pilots may be vectored to join the APCH axis at latest 11NM touchdown.

2.3 Visual approach

If cleared for visual APCH, pilots will be instructed to join or be established on the APCH axis as follows:

- for RWY 22: at latest 8.1NM touchdown (GG808), MNM *4000 ft QNH*, for arrivals from the north, or at latest 11 NM touchdown (GG811), MNM *4000 ft QNH*, for arrivals from the south.
- for RWY 04: at latest 5.6NM touchdown (PAS VOR).

2.4 Landing

More than idle reverse shall not be used except for safety reasons or if necessitated to comply with an ATC request.

3. Departure

Follow strictly published SIDs for RWY 04 and 22 (LSGG AD 2.24), in order to minimise noise around Genève AP.

The climb is carried out as follows for jet and propeller ACFT:

1. TKOF up to *2900 ft QNH* with:
   - (reduced) TKOF PWR;
   - V_2 + 10 to 20 kt speed or in accordance with climb gradient limitation
2. from *2900 ft QNH* to *4400 ft QNH*:
   - climb PWR
   - V_2 + 10 to 20 kt speed
3. from *4400 ft QNH*:
   - ACFT clean up and acceleration to climb speed

KONIL C/J SIDs will only be assigned to propeller ACFT and jet ACFT with noise classification IV and V in accordance with GEN 4.1.12.

Above 5000 ft/AGL, ATC may permit pilots to deviate from SIDs to shorten the path towards the DEST.

Adherence to Noise Abatement Procedures is automatically MNT by a noise MNT system.

4. Visual circuit

Visual circuit for jet and propeller ACFT shall be flown on the northern side of the AP, as follows:

- right (RWY 22) or left (RWY 04) turns for cross-wind at 4 DME ILS (04/22)
- CMB to 3500 ft, max IAS 180 kts,
- base-leg on ATC instruction.

5. Auxiliary Power Unit (APU) and Brake Fan

5.1 Stands

A. **Stands 1, 2, 3, 3A, 4, 5, 8, 9 to 11, 15 to 19, 31 to 34, 42 to 44, 151, 152, 181, 182, 191, 192**

These stands are equipped with fixed electrical PWR (400 Hz) and Pre-Conditioned Air (PCA) supplies. ACFT parked at these stands must use fixed electrical PWR and PCA supplies if required. The electrical PWR will be connected prior, or immediately after engine shutdown. PCA connection follows shortly after engine shutdown.

The use of the airborne Auxiliary PWR Unit (APU) is forbidden at these stands, except:

- before the ACFT is connected to the fixed electrical PWR
- five MIN prior to engine start- or push-back, or
- when fixed electrical PWR or PCA supplies system is U/S.

B. **Stands 54, 55, 56, 57, 58, 61, 62, 63, 64, 65, 66, 83, 84, 85, 86, 87, 89B, 89C**

These stands are equipped with fixed electrical PWR (400 Hz) supply. ACFT parked at these stands must use fixed electrical PWR supply if required. The electrical PWR will be connected prior, or immediately after engine shutdown.

The use of the airborne APU is forbidden at these stands, except:

- until the ACFT is connected to the fixed electrical PWR
- five MIN prior to engine start- or push-back
- when fixed electrical PWR supply system is U/S, or
- when climatic conditions require the use of the APU to cool/heat the ACFT.

5.2 All other stands

On all other stands, whether on south apron or on north apron GAC, airborne APU can only be kept in operation 10 MIN after ARR or started 30 MIN before DEP time.

5.3 Use of APU in particular cases

If the above mentioned restrictions cannot be fulfilled, prior AUTH of Genève AP Authority is required.

5.4 Use of Brake Fan

Use of brake fan shall be kept to the MNM.

1.1.2 OMNIDIRECTIONAL DEPARTURE PROCEDURES

GENERAL INFORMATION AND REQUIREMENTS FOR OMNIDIRECTIONAL DEPARTURE PROCEDURES

- Omnidirectional departures assigned by ATC only in case of unserviceable NAVAIDs.
- If unable to comply with the specified PDG advise ATC.
- Close-in obstacles: RWY04/22 Trees and poles each side of RCL up to 170ft above DER ELEV.
- RADAR required. Departing aircraft may be cleared to proceed direct to existing terminal points. Expected routing provided by ATC.
- Specified MCAs are subject to MVAs and airspace structure. Published PDGs do not guarantee MCAs.
- To expedite traffic, expect line-up clearances at INT unless operations require full RWY LEN (Declared distances, Ref LSGG AD 2.13).
- When RWY 04 is in use: due to wake turbulence, all ACFT except HVY jets should be prepared for both full LEN DEP and DEP from displaced THR. ATC will provide line-up instructions. Pilots shall advise TWR 118.700 MHz on initial call if unable to accept DEP from displaced THR (Declared distances, Ref LSGG AD 2.13).

1.4 ILS category III

The CAT III ILS (RWY 22) and the associated equipment are in compliance with ICAO SARPS.

1.5 Visual approaches by night

Due to high terrain, ATC will not initiate visual APCHs at night. Pilots familiar with the area may request visual APCHs at night. Requests will be APV subject to traffic conditions.

1.6 Runway Occupancy Time

Departures:

1. If not fully ready, TAX into the HLDG bay.
2. Pilots should be fully ready for a rapid line-up in sequence in accordance with ATC instructions.
3. Pilots should ensure that cockpit checks are CMPL and cabin secured prior to line-up and be able to initiate the TKOF roll immediately upon receiving TKOF clearance.

Arrivals:

1. Pilots are reminded that rapid RWY vacation enables ATC to apply closer spacing on final APCH, allowing MAX RWY utilisation and minimising the occurrence of go-arounds.
2. Runway 04:

Exit TWYs to be used whenever possible:
For parking stands on South apron:

a. Heavy ACFT: TWY C (1650 m from displaced THR) or TWY B (2350 m from displaced THR);
b. Medium/Light/Small ACFT: TWY D (1300 m from displaced THR) or TWY C (1650 m from displaced THR).

For parking stands on North apron:

a. Medium/Small/Light ACFT: TWY Y (1600 m from displaced THR).

3. Runway 22:

Exit TWYs to be used whenever possible:
For parking stands on South apron:

a. Heavy/Medium/Light/Small ACFT: TWY D (2000 m from THR) or TWY E (2600 m from THR).
TWY C shall not be used, except on ATC instruction.

For parking stands on North apron:

a. Medium/Light/Small ACFT: TWY Y (1800 m from THR).

1.7 STAR Descriptions

GENERAL INFORMATIONS AND REQUIREMENTS FOR RNAV STARs

- No turn onto base unless cleared by ATC.
- All STARs contain a HLDG pattern. HLDG procedures are only applied when requested by ATC. Expect radar vectors to final APCH RWY 04/22.
- ACFT cleared for an RNAV STAR may proceed beyond the IAF in accordance with the STAR.

2. Advanced Surface Movement Guidance and Control System A-SMGCS

The A-SMGCS at Genève AP is supported by SMR and Mode S multilateration, which provides ACFT PSN information and IDENT to “TWR”, “Ground” and “Apron Control”. These units will pass information and instructions on the appropriate frequencies REF: LSGG AD 2.18.
ACFT operators intending to use Genève AP shall ensure that Mode S transponders are able to operate when an ACFT is on the ground, transmitting Mode S squitter and replying to Mode S addressed interrogations only.
When an ACFT is on the ground, the transponder shall be inhibited to reply to Mode S all-call interrogations and replies to Mode A/C interrogations shall also be suppressed.
FLT crew shall select the assigned Mode A (squawk) code and activate the Mode S transponder on request for push-back or TAX, whichever is first, and after LDG until RCH the ACFT stand. The transponder shall be switched off immediately after parking.
Activation of a Mode S transponder normally means selecting the AUTO or XPDR PSN and transponders provided with on-the-ground sensors are automatically switched to this function before TKOF and after LDG. If using a transponder not fitted with an on-the-ground-sensor then refer to the operator's guide. Selection of STAND-BY mode will not activate the Mode S transponder and selecting ON could override the required suppression of SSR Mode A replies and Mode S all-call replies when an ACFT is on the ground.

3. Bird Hazard and Wildlife Management Services

Bird hazard and wildlife management services operate within the AP BDRY and up to 500ft AGL.
A system is installed to prevent bird-strikes. It comprises 40 remote-controlled multiple detonation cannons on both side of the CONC RWY. Crews may request its activation by contacting ATC.
In accordance with ICAO, following any collision with an animal, a "Bird Strike Report" shall be CMPL by the crew involved.
