| <b>NOTES:</b> | <p>The ATC surveillance minimum altitude chart shows the lowest altitude for the APPROACH / DEPARTURE sectors of LSZR which may be assigned to an IFR flight under radar vectoring.</p> <p>The chart may only be used for cross-checking of altitudes assigned while under radar vectoring.</p> <p>Altitudes: LSZR QNH.</p> <p>Transition ALT: 5000</p> <p>Minimum altitudes over Swiss territory are calculated according ICAO norms (PANS-ATM Doc 4444 &amp; PANS-OPS Doc 8168).</p> <p>Minimum altitudes over Swiss territory are protected for low temperatures to minus 19 degrees celsius (LSZR temperature).</p> <p>The raised minimum altitudes (values in brackets) are generally valid for the time period between AIRAC date NOVEMBER to AIRAC date MARCH.</p> <p>Sectors indicated all 30°, distances indicated all 5 NM, based on LSZR ARP.</p> |
|               | COR: sectors (WEF 23MAR2023)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
